Summary

Applied AI Engineer / Software Engineer with 2+ years of experience building production LLM applications, RAG systems, agentic workflows, and backend data platforms. Strong in Python, FastAPI, LangGraph, LangChain, PyTorch/QLoRA, Elasticsearch, Docker, Azure, and LLM evaluation.

Work Experience

PiSrc

New York, NY

Software Engineer

Mar 2024 – Present

AI Skills Orchestrator – Agentic Authoring & QA Agents

- Architected a LangChain/LangGraph tool-calling Skills Orchestrator for AEM/CMS authoring and QA; decomposed requests into Planner, Executor, and QA agent flows with schema-bound skills, reducing repetitive authoring time by 60%+.
- Added schema validation, QA checks, retry/fallback logic, execution tracing, and human-review escalation so malformed agent outputs were blocked before reaching AEM production content.

Agentic RAG Chatbot Optimization

- Upgraded a production RAG chatbot from broad document search to an agentic retrieval workflow that routes queries to Azure-hosted indexes, rewrites ambiguous questions, and reranks results, improving retrieval accuracy by 40%.
- Dockerized retrieval services and improved distributed ingestion/indexing with Docling PDF processing, table-aware chunk enrichment, and HTML hierarchy detection, increasing user satisfaction by 60%.

Product Data Integration Pipeline – LLM-powered Translation & Processing

- Designed an LLM-assisted product data pipeline that ingested 500K+ records and 100K+ daily deltas from four APIs, normalized multilingual product metadata, and indexed results into Elasticsearch for global search.
- Built Dagster batch/incremental workflows with idempotency, schema evolution, backfills, validation, failure recovery, and observability; automated translation workflows saving \$500K/year.

Projects

AI Job Analyzer – Local Qwen QLoRA Skill Intelligence Platform

github.com/danling-wei/ai-job-analyzer

- Built an agentic job-market analyzer with LangGraph, FastAPI/SSE, SerpApi scraping, JD deduplication, structured skill extraction, and a web UI for skills, summaries, responsibilities, and evidence.
- Fine-tuned Qwen3-1.7B with PyTorch/QLoRA on OpenAI teacher-labeled postings; routed high-volume skill extraction to local Qwen and final synthesis to stronger OpenAI models.
- Built an LLM evaluation harness comparing base Qwen, GPT-5-mini, and QLoRA adapters on 299 held-out samples using precision, recall, F1, and faithfulness checks.

Skills

Languages: Python, Java, TypeScript, JavaScript, Shell

AI / LLM Systems: RAG, Agentic Workflows, Tool Calling, LangChain, LangGraph, PyTorch, QLoRA, LLM Evaluation

Data / Backend / Quality: Elasticsearch, Weaviate, Redis, MySQL, Dagster, FastAPI, Docker, Azure, Distributed Systems, CI/CD, pytest

Education

Columbia University

New York, United States

Master of Science, Electrical Engineering (Computer Science Track)

Sep 2022 – Dec 2023

Beijing University of Technology

Beijing, China

Bachelor of Science in Software Engineering

Sep 2018 – Jun 2022
